

NMB Splice-Sleeves® "Pin Setter"

Splice-Sleeve North America now offers the Pin Setter for setting NMB Splice-Sleeves® in the form. As the name implies, the Pin Setter uses three metal "Setter Pins" to extend up inside the NMB's shell, grasping the rim or "lip" at the opening and holding the sleeve with a tight metal to metal connection. This connection is even tighter than the Cam-Lock with Rubber Setter, so with the New Pin Setter the sleeve projects 90 degrees from the form with **absolutely no droop.**

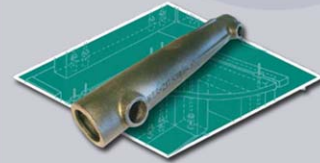

Characteristics of Pin Setters:

- Easy and fast installation.
- Hard and durable. The only non metal items are the inexpensive Rubber Ring and Washer.
- Pin Setter's metal head and pins keep the sleeves firm and straight to the molds - even better than the existing Cam-Lock with Rubber Sleeve Setters.
- Two pin setters to replace five Setter Rubbers/Washers, thus saving money and space. The Pin Setter is currently available in two size ranges: PS 8-10 (sleeve sizes 8, 9, and 10) and PS 11-14 (sleeve sizes 11 and 14).
