

NMB Splice-Sleeves® makes grouting work much easier and cleaner, Stopper with Indicator, Volume 3 of 3

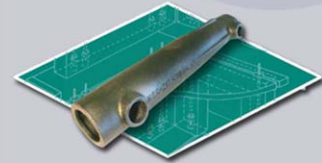

Now pay attention! It's a grout outlet tube self sealing **Stopper with Indicator** built in. It allows your men in the field to know when they've had enough and to stop pumping. The Stopper inserts

tight into the PVC outlet tube. The plunger allows air and water to pass but when good grout arrives it pushes the plunger against the Stopper, automatically sealing off the tube - eliminates "Messy Galore". At the same time the Indicator shaft pops out showing it is "done".

All the usual patents are in progress of course, and have taken years to perfect. It has already been used very successfully on international operations. No more mucking about with two men, catching cups and plugs, spills & cleanup. Once grout stiffens, just remove, clean and reuse.

The **Stopper with Indicator** along with the **Self Sealing Valve** and nonmetallic **SS Mortar's** high-flow characteristics, allows you to get in, and get out with one man, in less time and without a trace.

Over **21 million** Splice-Sleeves® in use worldwide
