

Horizontal Sliding Connection with NMB Splice Sleeve®

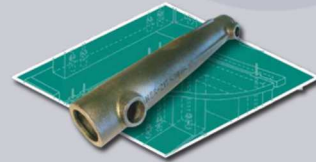

NMB Splice Sleeve's standard models with the rebar stop removed can be easily used for horizontal sliding connections in beam to beam, column to spandrel, and deck panels. Once grouted with SS Mortar® on site, a concrete closure pour encloses them, thus completing the emulative connection.

NMB Slim-Sleeve® (ICC-ES Type 2 Evaluation Report is being applied) is specifically designed to be used for slide connections. It is thinner than the standard Splice-Sleeve, thus less congestion and better cover. NMB Slim-Sleeves® have a rubber plug at both ends and built in self seal valves.

Over **21 million** Splice-Sleeves® in use **worldwide**
